

Far infrared rays(FIR), penetrate deep into the human body (right down to the bones) where they gently elevate the body's surface temperature increasing surface blood flow in capillaries. This relaxes muscles and induces effects similar to a session of aerobic exercise.

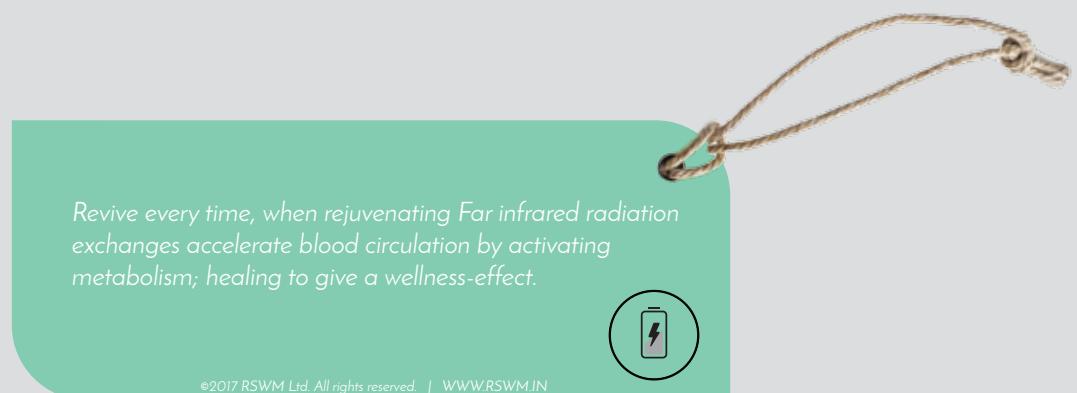

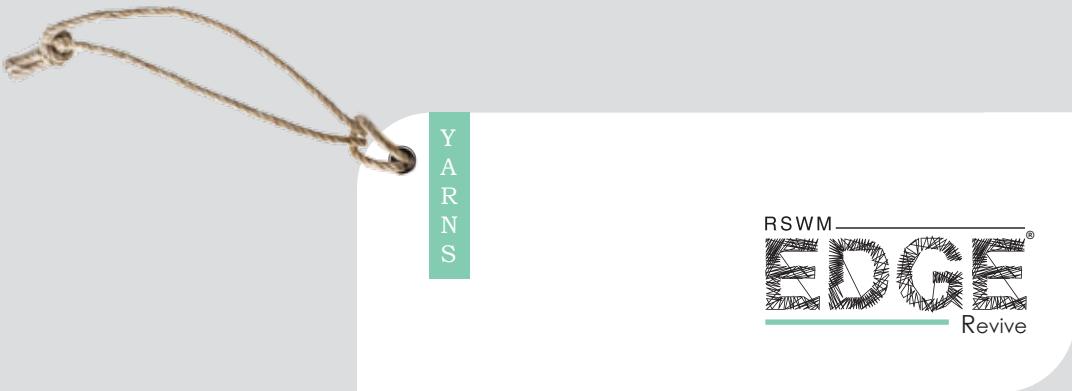

FIR, alleviate healing, improve flexibility, stimulate metabolism and thus replenish energy.

Ceramic-impregnated fabrics having nano sized particles that absorb body heat and re-emit it as far infrared rays, thus inducing the healing power of FIR on coming in contact with the body.

RSWM EDGE™ Revive yarns are a blend of fibres like bamboo charcoal and celliant, with ultra comfortable miyabi, wool or with cotton, bamboo and many others, that are spun to give garments that heal while sleeping or re-energise and give a boost to the body during the day.

“ Revive every time, when rejuvenating exchanges accelerate blood circulation by activating metabolism; healing to give a wellness-effect. ”

Size of hang tag:  
1.45" X 3.74"

Rules of acquiring tags:

5 HT/kg for garments that contain at least 50% RSWM EDGE™ Revive yarn.

RSWM EDGE™ Revive yarn range

Revive\_47056000D

\*Final decision of issuing the hang tag lies with RSWM Ltd. The garments need to conform with certain standards specified and the values indicated are only an estimate and the product will be tested to determine the tag's features.
