

At RSWM, we blend together yarns that help transform a house into a warm home, using a combination of some of the coziest fibres and aesthetic textures available.

HOME YARNS

Home is where the heart is. It's only fair that we all make sure that the products that make our household better are the best in class and quality. In order to facilitate that very need in our society, we create some of the finest yarn blends suitable for specific applications in the home furnishing market. These are some of the qualities we blend our products with -

Abrasion resistance - wear and tear are common to any industry. It's even more common when you're dealing with hazards in a high-risk environment.

Durability - the home should only be a place for reliable yarn, something that strengthens your home furnishing elements and can endure through the years.

Flame retardancy - using a combination of inherently flame retardant fibres and other textile engineering technology, we achieve varied degrees of fire safety.

Stain resistance - where there's a will, there's always a spill. A concrete resilience in the face of stains, marks and the odd scribble is a necessity in homes today.

Here's a glimpse at our top home furnishing yarn offerings -

1. 100% Recycled Polyester

Well endowed yarn that has been recycled and strengthened to perfection defines our 100% recycled polyester blend. With properties similar to virgin polyester, this one comes with goodness added in.

2. Combed Cotton + Nylon

Combed cotton makes sure a home isn't riddled with fleeing fibres here and there, while nylon adds the durability factor. This blend is a mix of versatility with function, making it suitable for every home.

3. High Bulk Polyester + Cationic

Using sophisticated processes to deliver high bulk polyester that is thick and supremely durable, we blend it with cationic fibres that allow ease of dyeability as well. What results is a glorious mix of colour and strength.

4. Cotton + Linen

Linen allows great airflow while cotton keeps it light. This blend combines the classics of home furnishing to create a fine product that suits a majority of households and furnishing products.

5. Viscose + Nylon

This blend is a combination of the highly absorbent, colour retentive and versatile viscose fibre with the durable and resilient nylon. It's one of our best offerings.
